

Shawn Marincas

Solution Architect / Full-stack Developer

- ▶ Skilled computer engineer with 20 years of experience in full stack web development and solution architecture.
- ▶ Passion for solving complex problems and building scalable, maintainable, and secure software.
- ▶ History of delivering high quality solutions for clients and employers.
- ▶ Experience working with agencies and startups across a broad range of industries and business domains.
- ▶ Strong knowledge of general systems science and engineering, including data modeling, analysis, and machine learning.

Experience

Allstar.gg New York City 2023 - Present

Senior Software Developer and Solutions Architect

- Architected real-time data synchronization pipeline processing MongoDB changestreams to Neo4j graph database using NATS JetStream, achieving sub-second latency with batch optimization and LRU caching for high-throughput oplog processing.
- Designed and implemented multi-language protobuf messaging architecture (TypeScript, Ruby) with automated GitHub Packages distribution and NATS stream validation utilities for microservice communication.
- Built federated GraphQL subgraph service integrating Neo4j graph database with Apollo Federation gateway, enabling efficient relationship queries across user, match, and content data with Prometheus monitoring.
- Developed Ruby notification microservice bridging NATS JetStream message broker to third-party notification platform (Novu) with multi-topic event routing and GraphQL API integration.
- Created open-source TypeScript NATS routing library (NatsRun) published to NPM, providing Express-like pattern matching for NATS subjects with wildcard support and middleware chaining.
- Deployed Kubernetes-based microservices architecture using Helm charts with separate pods for GraphQL API and dedicated NATS consumer workloads, automated via GitHub Actions CI/CD to AWS EKS.
- Engineered automated video highlights pipeline processing game footage with MongoDB aggregations, Node.js workers, and FFMpeg for social media distribution.

Halo Media New York City 2021 - 2023

Solutions Architect and Technical Lead

- Architected and developed platform for managing legal contract templates and workflows for merging data to generate contracts using Angular, NestJS, MongoDB, and S3.
- Designed and built system for managing legal template variables specifying global default values, and default values based on region, language, and line-of-business using Angular, NestJS, and MongoDB.
- Architected Enhanced Document Service for managing documents, including legal contracts, which are readily converted to different formats and hashed for comparison.
- Built a COVID Vaccine Site Locator for large multinational client in India using NestJS, AngularJS, and custom component library.
- Designed centralized Authorization system for multiple workflow applications and Camunda orchestration system with Open Policy Agent.

Proficiencies

Language

JavaScript	TypeScript
NodeJS	ExpressJS
Python	Ruby-on-Rails
React	NextJS
Angular	NestJS
Swift	Ionic
Nim	Elixir

Communication

REST	WebSockets
GraphQL	Apollo Federation
NATS-JetStream	AWS SQS
FCM	APNS

Data

MongoDB	AtlasDB
PostgreSQL	AWS RDS
Neo4j	AuraDB
Redis	AWS S3
Cloudflare R2	

Infrastructure

Kubernetes	Helm
AWS Lambda	AWS EKS
Prometheus	Grafana
Heroku	Fly.io
GitHub CI/CD	

Tools

git	bun
docker	kubectl
ffmpeg	magick
claude	cursor
jq	playwright
awk	mongosh

Lead Architect and Developer

- Architected and built a scalable platform for managing millions of IoT identifiers and hundreds of interaction rules for delivering customizable mobile user experiences in retail, entertainment, and grocery locations using AngularJS, ExpressJS, and MongoDB.
- Built reporting dashboards to present data gathered by the IoT platform for clients to consume activity and engagement statistics using AngularJS, ExpressJS, and MongoDB.
- Installed, integrated, and supported post-sale client IoT-based systems for enhancing customer experience in retail, entertainment, and food service locations.
- Boosted mobile engagement by designing and implementing an automated photo kiosk capture and delivery system, using NodeJS on Raspberry Pis to interface with cameras and customers with QR codes
- Powered the Adidas NFC sneaker campaign and Detroit Pistons BLE stadium integration by architecting and developing an IoT Routing Platform managing interactions between identifiers (BLE, NFC, QR) and user applications
- Developed and installed RPi wireless signal trackers at movie theaters to drive custom display advertising
- Designed and implemented an interactions data collection and analysis system in NodeJS and MongoDB, allowing deep data processing of customer engagement patterns
- Designed and implemented mobile applications using AngularJS and Ionic, allowing clients to configure and manage their IoT devices

Chief Technology Officer

- Co-founded a digital web development agency and managed a team of 5 developers, project managers, and administrators to engineer and deliver rapid-prototype web applications using Node and AngularJS
- Built and negotiated contracts, Statements of Work, and project plans; acquired and directed complex projects to transform business ideas into achievable plans for high-yield MVPs
- Built and managed CMS-based websites using Wordpress and Shopify, allowing small retail and service businesses to expand their marketing and sales operations online.

Education

Honors Graduate, Bachelor of Engineering in Computer Engineering
